Deliverable: Third Party Module v0.1

March 24, 2009

Author: Matt Glass

Third Party Module

Third party JavaScript/iFrame/Flash etc widget/module.

1. Module width, border and padding to be editable as site needs (dictated by site's look & feel.)
2. Optional title, graphic or HTML text.
Both title and module border can be removed if third party provides these within the widget.
3. Third party widget JavaScript/Flash/iFrame etc

Given the nature of third party modules, definitions around specific content can not be made, other than providing an empty box to accommodate potential needs.
